

ACARIL[®] wash concentrate

especially developed for house dust mites allergy sufferers

Liquid wash concentrate for temperature-sensitive fabrics up to 60°C.

Mode of action:

Together with the washing lye and surfactants washing compounds (anionic tensides) ACARIL[®] removes house dust mites and their allergenic from textile fibers (e.g. clothes, quilts, pillows and duvets (particularly those with synthetic filling materials), soft toys etc). ACARIL[®] is suitable for hand washing and for washing in a washing machine.

Instruction for use and dosage:

Machine washing:

Use the main washing program without economy or short-wash settings; if possible use the additional rinsing program.

Put 20 ml ACARIL[®] (use the measuring cap) into the detergent chamber for the prewash and add the regular washing detergent into the chamber for main washing program.

20 ml ACARIL[®] is sufficient for 20 l water (5kg washing). For lower or higher quantities of water, reduce or increase the amount of ACARIL[®] appropriately (e.g. add 10ml ACARIL[®] to 10 litre water).

Hand washing:

Mix 10 ml ACARIL[®] with 10 liters of water. It is recommended to soak the laundry minimum 1 hour. Add optional your regular washing detergent. Please ensure that textiles become thoroughly soaked with the ACARIL[®] solution. After soaking, rinse well!

Treatment with ACARIL[®] should be repeated. As ACARIL[®] is rinsed out of textiles there is no guarantee for a long- term protection.

Important advices:

- Keep out of children.
- Keep separate from food and beverages.
- Do not apply to humans or animals.
- Wear protective gloves when measuring the product and for hand washing.
- If used incorrectly, irritation of mucous membranes (e.g.) eyes and skin may occur. Eyes and skin should be rinsed immediately, using plenty of water.
- Store over 5°C.

Available packing size:

- Bottle with 250 ml.
